

Assessment

Backup and Recovery

You understand the importance of backing up and archiving your data for future reference. Now you need to verify that the backup, archive, and recovery systems are sufficiently, intelligently and cost-effectively meeting your needs. Disparate systems, decentralized storage systems and repetitive processes across your entire enterprise all cost your company money, in terms of dollars and efficiencies.

Data Protection / Data Management Assessment Service

CDI consultants undertake a systematic assessment of your enterprise backup, archive, and recovery system requirements by examining your storage availability and management, information access, data migration and physical location and environment needs. This allows us to facilitate the centralization of storage across all platforms and ensure the proper backup of all business-critical data to a single, fault-tolerant backup management solution.

The assessment tracks the information required by your functional business units for their day to day business and the access levels defined by a disaster recovery plan. Our methodology includes assessing your security, storage management and training and staffing needs as well.

After conducting a thorough inventory of your backup and storage hardware and software systems, CDI consultants identify and propose the technologies that will ensure your system has the capability, capacity and feature-sets necessary to cover your current and future needs. We also offer recommendations on best practices for linking your primary and any secondary or designated disaster recovery sites.

With a thorough analysis of your Data Protection / Data Management architecture, our consultants not only recommend additional investments in hardware, software and management components, but they also justify the expenditure with detailed cost-benefit analysis.

Trust Your Data Protection / Data Management Systems.

Don't wait until it's too late to realize that your backup, archive, and recovery system is ineffective, at best. The Data Protection / Data Management Assessment service from CDI gives your company the confidence that your network operations have the capability and the capacity to withstand unexplained downtime.

CDI is an IT infrastructure services company that lends their knowledge, experience and credibility to help you identify and satisfy your backup, archive, and recovery needs. Our experts will recommend and implement an intelligent backup and storage system that provides the peace of mind from knowing your data is safe and available.
