

# Cisco Security

## Networking/ Security

### How important is it to have a strong security policy?

The open nature of the Internet makes it increasingly important for growing businesses to pay attention to the security of their networks. As companies begin to move more and more business functions to the public network, they need to take precautions to ensure that the data will not be compromised. Unauthorized network access can wreak havoc with your proprietary data, negatively affect company productivity, and stunt your ability to compete.

### Cisco Clean Access

#### Control Access To Your Network By Enforcing Compliance.

Cisco Clean Access is an easy deployed software solution that can automatically detect, isolate, and clean infected or vulnerable devices that attempt to access your network. Identify whether networked devices such as laptops and personal digital assistants are compliant with your network's security policies and repairs any vulnerabilities before permitting access to the network. Networks with Cisco Clean Access can realize benefits such as:

- Minimize network outages
- Enforcement of security policies
- Significant cost savings with automated device repairs and updates

### Cisco Security Agent

#### Provide Defense for Servers and Desktops

Cisco Security Agent provides threat protection for servers and desktop computing systems, also known as endpoints. Help reduce operational costs by identifying, preventing and eliminating known and unknown security threats. The Cisco Security Agent consolidates endpoint security functions in a single agent, providing:

- Host intrusion prevention
- Spyware/adware protection
- Distributed firewall capabilities
- Malicious mobile code protection
- Product Acquisition

### Cisco Security Monitoring, Analysis and Response System

#### Readily and Accurately Identify, Manage and Eliminate Network Attacks

The Cisco Security Monitoring, Analysis and Response System (CS-MARS) extends the portfolio of security management products for the Cisco Self-Defending Network initiative. Cisco CS-MARS offers a family of high-performance, scalable appliances for threat management, monitoring and migration, enabling customers to make more effective use of network and security devices. CS-MARS combines network intelligence, context correlation, vector analysis, anomaly detection, hotspot identification, and automated migration capabilities. The result is a system that helps customers to readily and accurately identify, manage and eliminate network attacks and maintain network security compliance.

### Enterprise – Wide Management

our IT network must stay one step ahead of hackers, viruses and other threats to your company's important asset – its corporate data. As a full service IT infrastructure services firm, CDI lends its knowledge, experience and credibility to solve your network and security management challenges.
