

Active Directory

Microsoft

Features

Simplified Deployment and Management

Greater Security

Improved Performance & Dependability

Benefits

Reduces total cost of ownership

Easier management of multiple forests & cross domain trusts.

More efficiently manage the replication and synchronization of information

Build a secure and scalable operating system infrastructure

Your network is a dynamic, complex, and heterogeneous environment. With the explosive growth of network computing, the need for more powerful, transparent, and tightly integrated directory services to manage identities and relationships of distributed network resources is a requirement. Selecting the right directory service directly impacts your organization by Reducing Total Cost of Ownership and Increasing Productivity.

Microsoft Active Directory gives you the ability to have a single, central point of management for your Windows-based users, clients, servers and applications to help protect network resources and employee identities with single sign on capabilities. Active Directory also provides the flexibility to integrate other network operating systems by creating a high performance central information store based on standard protocol.

Active Directory Simplifies Tasks

Active Directory is the integrated, distributed service that is included with Microsoft Windows Server 2003 and Microsoft Windows 2000 Server. Many applications and services that previously required separate user ids & passwords are now integrated with Active Directory. With Active Directory, the administrator of your company can add users through a single entry and provides a single sign-on for users. Once users log in to Windows, their Active Directory status is the key that will unlock all of the applications that have been enabled for the user's authentication.

The operating systems and Active Directory services leverage the unparalleled experience with multi-vendor environments including Microsoft, Novell and Linux/Unix, etc. Together, we help you harness the power of technology to create a solid platform that aligns with your business objectives. Leveraging industry standards along with our structured engagement processes, our consultants can help you plan, design, implement and operate a resilient, secure and scalable Directory Service/Operating System Infrastructure. CDI has extensive experience and intimate knowledge to maximize your Active Directory environment.

Expertise You Can Count On

CDI is an IT infrastructure services company that lends knowledge, experience and credibility to helping companies facilitate communications and collaboration between employees, partners and customers around the world.
