

American Stock Exchange and Computer Design and Integration Create Key Strategic Partnership

CDI Alliance provides AMEX seamless integration, solutions and services across platforms

Computer Design and Integration LLC has landed a key contract with the American Stock Exchange (AMEX) to provide the architecture, design, integration and implementation of a new software system for the global trading giant, as well as hardware infrastructure and post-sale implementation and integration services.

The multi-million dollar deal will ensure a seamless migration of core business transactions for AMEX, and CDI implementing critical hardware solutions that deliver across the board expertise in networking, system management, consulting and support.

Processing hundreds of millions of daily transactions, AMEX first turned to CDI to provide an end-to-end monitoring management package for their complex global database network. As an HP OpenView Gold Certified partner, CDI gave AMEX the support they required to get the mission-critical systems and network monitoring software tool successfully launched.

“CDI absolutely helped us meet our objectives,” Ravi Apt, Executive Vice President, American Stock Exchange told the ABC television program Business Now. “Things that work can suddenly break down, but we can achieve recovery within five minutes, and CDI helped us accomplish that.”

The HP OpenView success led to a greater alliance between the two companies, with CDI’s innovative and comprehensive solutions and services in Business Continuity, Network Services, Security, Application Development and Enterprise Server and Storage leading to the key strategic partnership announced today.

Chris Falzarine, CDI Vice President of Business Development and Marketing, hailed the highly integrated alliance as a natural outgrowth of the people, processes and technology CDI brings to the table.

Falzarine says, “By meeting AMEX’s management, networking, time support and consulting needs, the relationship has evolved into a key strategic partnership, with CDI integrating systems and consulting on a mission critical level on every system in their environment.”

Computer Design and Integration LLC is a privately held organization recognized as a leader in provisioning, integrating and supporting mid-market and global business infrastructures and solutions since 1995.
