CDI's one-time security validation makes it simple to measure, track, and improve your security posture across the full kill-chain. The SaaS-based platform deploys and provides results in minutes, combines automated reconnaissance, security awareness, infrastructure resilience and security control validation.

Rapid Controls Assessments are scored and include actionable remediation guidance to mitigate risk and optimize security control effectiveness.

Start making security decisions based on unbiased data

CDI provides flexible resources to leverage as an extension of your security operations. From strategy and procurement, to professional services and management, we can tailor a solution to maximize your current resources and reduce the cost and complexity around security.
