

Rapidly accelerate your cloud initiatives and adapt to the new normal

The current global situation has forced the physical world to be replaced by the virtual. Many organizations are seeing added pressures of scaling up to accommodate remote work, or to run more workloads in the public cloud to accommodate staffing reductions in traditional data centers.

CDI's Kickstart Program for Public Cloud enables customers to quickly execute their cloud initiatives and move their on-premises VMware workloads into the public cloud (CDI Cloud, AWS or Azure).

Activities Include:

- Securely design, build, migrate and manage - pre-and-post move
- Cost-effectiveness aligned to business needs
- Zero downtime migrations
- Ability to scale-up in moments
- AICPA Type 2 SOC 2 Compliant: designed to meet all major security compliance requirements
- High-availability, data access, backup and replication
- No re-platforming needed
- Improved RPOs, flexible RTOs
- Discovery, planning and cost estimation for VMware Cloud on AWS usage
- Deployment and configuration of VMware Cloud on AWS SDDC Cluster
- Integration and connectivity of SDDC Cluster to corporate and native AWS environments
- CDI Managed Services integration for monitoring and management of SDDC Cluster
- Microsoft Azure: design, migration, deployment and managed services
- Buyback of legacy on-premises hardware

Why CDI?

VMware Principal Partner

Holds four Master Services Competencies (Data Center, Cloud and Automation, Network, VMC on AWS)

VMware Partner Technical Advisory Board and Partner Advisory Council Member

VMware Design Partner Member

2016 Americas VMware Partner Innovation Award – SDDC

One of eight national partners to achieve VMware Cloud on AWS Solution Competency and AWS Service Catalog Accreditation

AWS Partner Network (APN) Advanced Consulting Partner

AWS Managed Services Provider
